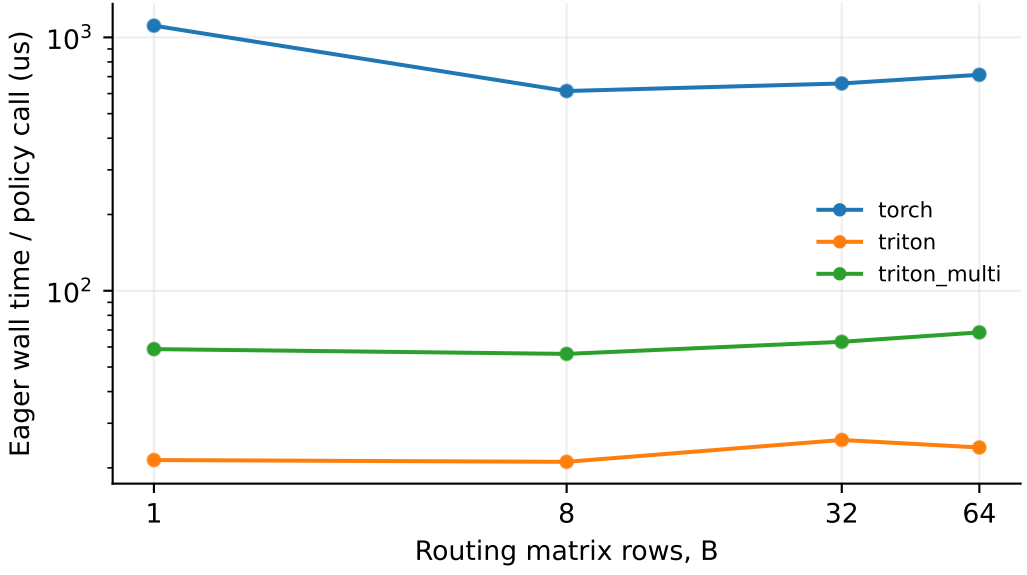
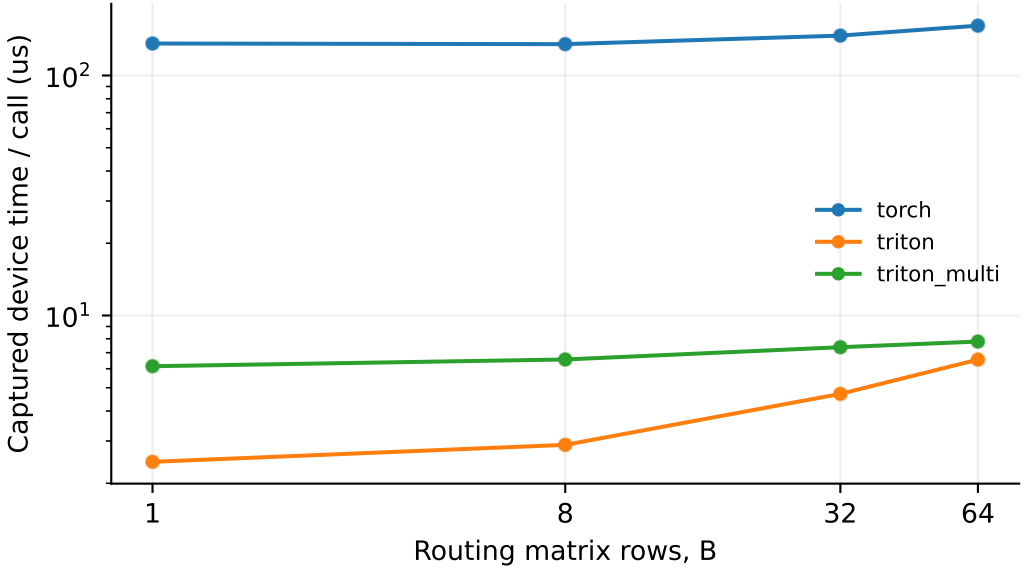
F6 E=64, k=8 | NVIDIA RTX PRO 6000 Blackwell Server Edition





Measured synthetic routing policy + counters microbenchmark; not MoE/service speedup. Each source execution is one run.
Eager wall time includes host dispatch, launch and device work; it is not pure CPU time. Wall minus device time is not a CPU decomposition.
Captured-device timing excludes Python, allocation and individual launch dispatch; inner-loop calls are not independent repeats.
