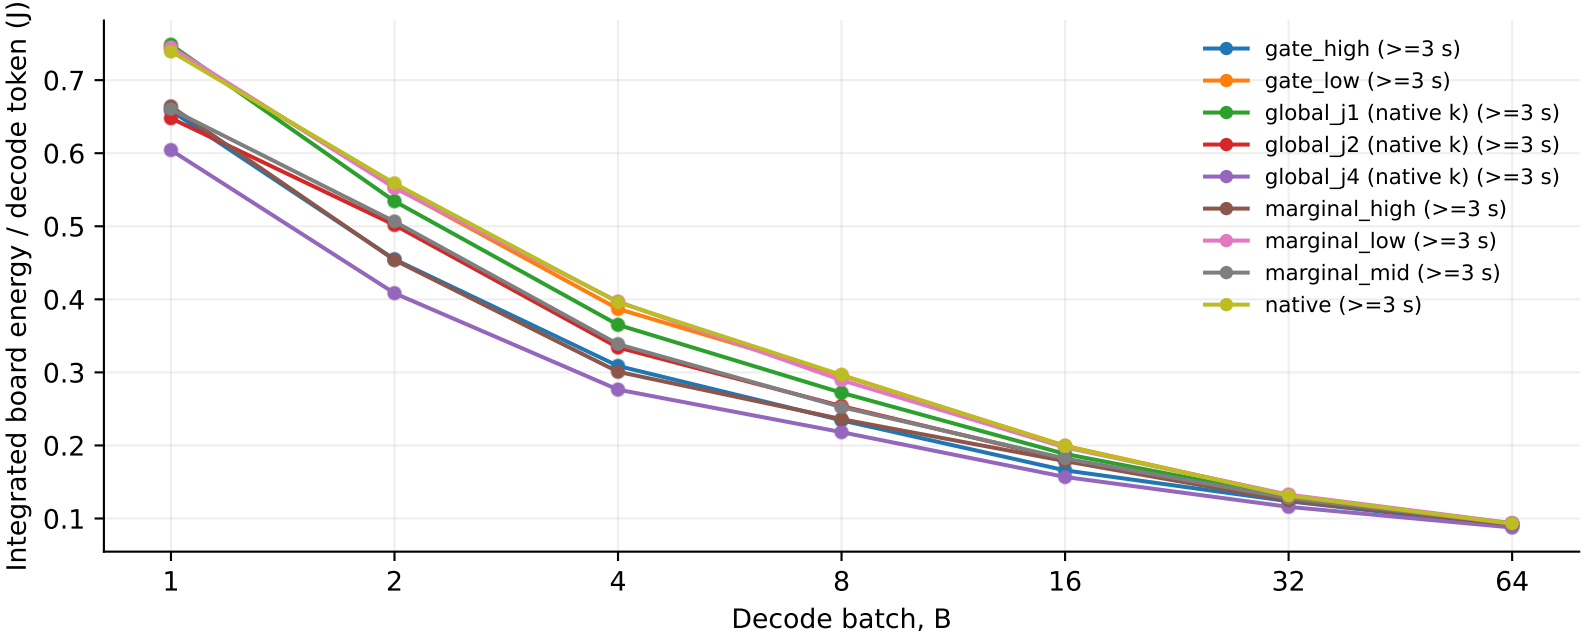
F4 OLMoE-1B-7B-Instruct | bfloat16 | quant=none | triton | graph | NVIDIA RTX PRO 6000 Blackwell Server Edition



NVML power-sample trapezoids; window starts after every first token, ends after final decode output.
Hollow points are <3 s / unknown-length diagnostics, excluded from steady-window mean lines; whole-board energy.
Graph decode; prefix 128, output 2048 (2047 decode steps). Exploratory single run; no independent-run uncertainty estimate.
