
Offline tracking: B=64, gamma=7
run 0: forecast
run 0: observed
run 1: forecast
run 1: observed
(a) Conditional acceptance
(b) Proposal availability
(c) Decode progress
Accepted / tested positions
$P(P \geq 1)$
Emitted tokens / request-step
Decode step (waves concatenated)
Decode step (waves concatenated)
Decode step (waves concatenated)
Offline EWMA replay; predictions precede each step, cold prior once per run, terminal requests censored.
Display bins aggregate recorded observations and forecasts; error CSVs use every step. This is not an executed adaptive policy.
