

Single-run strong baseline comparison

OLMoE-1B-7B (base) · article workload · 128/128 requests complete in every arm · RTX 5090

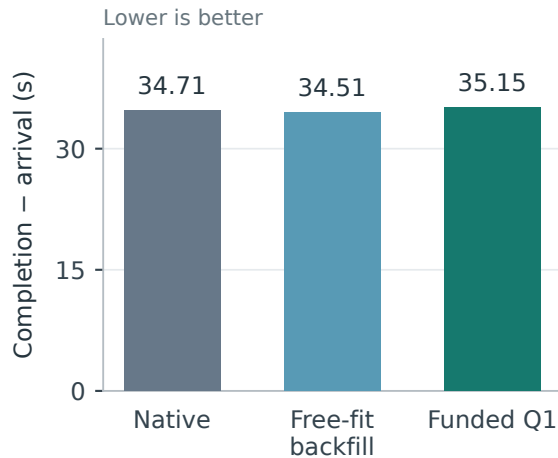

(a) Maximum-gap tail

(b) Output throughput

(c) Mean request flow

Exploratory: one run per arm; no confidence intervals or pooling across machines.

Serial run order: free-fit, funded Q1, native. Independent trajectories; actual output counts differ.
