

AR N1 N2 ○ Run 1 ◇ Run 2

(a) Work and complete service cost

(b) Delivered output

Natural EOS; 16 requests/run, n=2 independent runs/arm. Bars: run means; points: individual runs. Each metric is normalized by the AR run mean. Completion time includes final drain; initialization and warmup are excluded. Output counts differ; times are not equal-work speedups. OLMoE; artificial expert-cache cap of 24 experts/layer.
